

Always the best

GMO FREE FEED

Feed that is guaranteed free of all Genetically Modified Ingredients

We have recently put an arrangement in place with a very large, long established Italian meat retailer, to manufacture GMO free Calf to Beef concentrate feedstuffs for their approved Irish farmer beef suppliers.

This beef retailer is called Co-op Italia. They are the equivalent of Sainsbury's or Tesco in the UK and as such are one of the major players in the Italian retail meat sector. They have a rapidly expanding, premium priced, market for Beef that is guaranteed to have been fed non Genetically Modified feed (GMO free feed) for the entire life of the animal. They currently source massive amounts of GMO free beef from all over mainland Europe. They see the Irish Suckler weanling as being almost GM free beef by default because it is reared on a diet that is predominantly mother's milk & green grass.

So they have come over to Ireland & put us through a rigorous auditing process in terms of our ability to manufacture GMO free feedstuffs. We are delighted to be now fully approved, so we are one of the very few Irish feed mills that are in a position to supply GMO free feedstuffs.

This will be of particular interest to those farms that have been audited & approved by Coop Italia as potential suppliers of GMO Free beef.

We have formulated a high cereal based weanling crunch to match the nutritional requirements of the rapidly growing weanling. High levels of energy and protein, carefully balanced with digestible fibre ensure high growth rates in the young animal. All the ingredients in this feed are guaranteed 100% GMO free. An excellent Mineral & Vitamin pack has been included in this ration to ensure optimum thrive.
