

Always The Best

J Grennan & Sons aim to:

Support The Sheep.

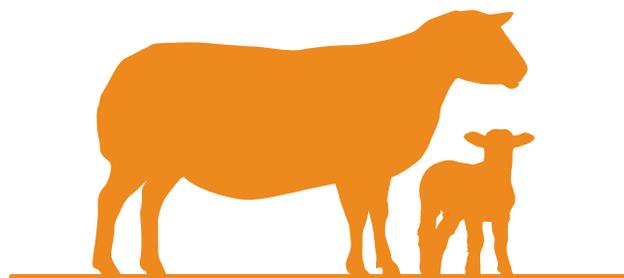

Nutrition is paramount in the overall productivity, health and well being of any sheep flock. Our focus is on top quality ingredients to compliment farm forages rather than act as a substitute.

Support the sheep farmer.

We stand over our feedstuffs. Whatever information and details you need, be that in relation to specific diets or our blueprint feeding programs, we are here to answer your questions.

Stay Irish.

We take into account the huge variation in grass growth patterns and the Irish weather and then adopt the flexibility in our programs to help Irish farmers to utilise and enhance their grass based systems.

Sheep Nuts

Elite Ewe and Lamb 20% Nut

Designed for the most prolific flocks where good lamb size and vigour at birth needs to be absolutely guaranteed irrespective of litter size. Hi-pro soya and ground maize make up the foundation of this diet to support the ewe in delivering excellent milk yields. This very high energy nut can also be used to increase the ration energy density where the forage is less than top quality. Lambs at foot should be offered a specific lamb creep feed once they reach 2 to 3 weeks of age.

Super Ewe and Lamb 18% Nut

Top class energy dense nut for in-lamb ewes where pregnancy is limiting dry matter intakes shortly before lambing and for lactating ewes with high quality proteins to boost both quality and yield of colostrum and milk for suckling lambs. This, along with bypass nutrients will ensure vigorous lambs at birth. Lambs at foot should be offered a specific lamb creep feed once they reach 2 to 3 weeks of age.

Prime Ewe and Lamb 18% Nut

Formulated to 18% protein to support pregnant and lactating ewes and to compliment good quality forage for the critical pre and post lambing periods. Suckling lambs can also be allowed access, but once intakes become significant, they should be offered a specific lamb diet.

Elite Lamb nut

Excellent quality nut delivering a highly nutritious and palatable starter feed for lambs. Ingredients are selected to ensure they are easily digestible, with a focus on maximising energy intakes and lamb development while preventing any digestive upsets. Due to being very high in energy it can be used to right through to slaughter when needed to compensate for difficult weather or grazing conditions.

Intensive Lamb Nut

This is a high energy creep feed for lambs. Formulated to 17% protein with high levels of top quality cereals to maximise both growth rates and kill outs. Suitable for all ages, so can be fed as a starter diet or as a follow on to our Elite lamb nut. As with all high feeding regimes, careful management is essential. We have specifically formulated the mineral balance to greatly reduce the risk of urinary calculi and copper toxicity in intensively fed sheep.

Lamb and Hogget Finisher Nut

Top quality nut suitable for growing and finishing lambs over 15 weeks of age. Formulated with a very high level of cereals with a good balance between rumen fermentable and bypass starch to help deliver excellent growth rates and a very high level of carcass finish. We have specifically formulated the mineral balance to greatly reduce the risk of urinary calculi and copper toxicity in intensively fed sheep.
