

# Gut Guard

Complementary Feed Supplement

Net Volume:  
250ml

Recommended level of use:

Calves - 7ml (35 doses)

Lambs or Kid Goats - 2ml (125 doses)

Piglets - 1ml (250 doses)

# Gut Guard

## Starter and Recovery Gel

Gut Guard is a unique 100% natural liquid feed supplement of tannic acid, tributyrine and charcoal with natural anti-pathogenic properties. It can be fed to new born and/or young farm animals as an aid in the prevention of disease. It can also be fed as an immune support supplement to help stabilise the gut and overall health of any animal experiencing scour.

Gut Guard strengthens the gut wall by tightening the junctions between cells, thereby limiting the ability of pathogens such as Coccidiosis, Cryptosporidium, Clostridia and E.coli to attach themselves to the gut wall and gaining an infectious foot hold. Gut Guard promotes the development of healthy gut microbes and beneficial bacteria. Where and when the pathogen bugs do gain an infectious foot hold and cause scour, Gut Guard Gel can help reduce the duration and severity of these scours.

### Feeding Instructions:

It should be administered 2-3 hours after the first colostrum feed. It is important that the new-born animal gets sufficient time to absorb the all-important immunoglobulins from the colostrum, before the gut wall is tightened up by Gut Guard. For more information please refer to label.

*This is not a veterinary medicine | For animal use only | Keep out of reach of children  
In cases of severe disease, always seek the advice of your veterinary surgeon.*
